Algebra is just like a puzzle where we start with something like " $x - 2 = 4$ " and we want to end up with something like " $x = 6$ ". But instead of saying "obviously  $x=6$ ", use this neat step-by-step approach: Work out what to remove to get " $x = \dots$ " Remove it by doing the opposite (adding is the opposite of subtracting) Do that to both sides

A Guide to Algebraic Expressions Teaching Approach In this series, we revise the basics of algebra such as number systems and products, we then establish the concepts of factorisation and algebraic fractions. The series covers a brief revision of number systems. In addition we revise the distributive law and FOIL and teach

Algebra, branch of mathematics in which arithmetical operations and formal manipulations are applied to abstract symbols rather than specific numbers. The notion that there exists such a distinct subdiscipline of mathematics, as well as the term algebra to denote it, resulted from a slow historical development. This article presents that history, tracing the evolution over time of the concept ...

Swinerton-Dyer's A brief guide to algebraic number theory has a different definition of norm of an ideal (page 25). Namely if  $A$  is an ideal of  $\mathcal{O}_L$ , it is defined as  $N(A) =$  ideal in  $\mathcal{O}_K$  generated by elements  $N(a)$  where  $a \in A$ .
