If you download the most recent version and unpack it, there is a file QuickStart.txt. Open it and search for "iptables". This firmware includes a method for including your own iptables rules. Testing Voxel firmware is not terribly difficult. Save a copy of the current configuration, perform a Manual Update using Voxel's "img" file.

`$ iptables -I DOCKER -i ext_if -m state --state ESTABLISHED,RELATED -j ACCEPT` The last observation focuses on one point : iptables rules is essential. Indeed, additional logic to ACCEPT some connections (including the one concerning ESTABLISHED connections) must be put at the top of the DOCKER table, before the DROP rule which deny all remaining connections not matching the ipset.

### **Manual:TOC - MikroTik Wiki**

The easiest way to manage your iptables configs on RHEL is to simply ignore the system provided config scripts entirely. I manage all of my RHEL systems with puppet, and use a fragments based approach as per Module Iptables Patterns.. This may not work for you if you're not a puppet shop, but at it's base all this does is build out the file /etc/sysconfig/iptables directly.
